Prepared for System Solutions Pros · November 2026

Digital Operations & AI Automation

A paid starting role: own the website and the path from a customer's first message to the team's next action, then automate the parts that pass testing.

I'm new to the electrical trade, and I won't pretend otherwise. What I bring is the ability to build and test AI tools quickly. Your team brings the trade knowledge, a person approves anything a customer sees, and the scope grows as the results justify it.

What I'll own

- Website content and public-information upkeep.
- Inquiry records, draft replies, and follow-up preparation.
- AI-assisted triage and drafting, evaluated before release and monitored after.
- Documentation and a weekly update on delivery, decisions, and next actions.

Already built

- A 24-section website review with 38 prioritized actions.
- An AI step that reads a customer message, sorts it, and drafts a reply for a person to approve. On a 40-message practice test it handled all 40 correctly, sent 6/6 emergencies to a person, and wrote 0 unsafe replies.
- Office templates, trackers, and a public facts register.
- The proposal site, designed, built, and deployed with AI-assisted development.

The first 90 days

Days 1–30	**Learn and deliver.** Validate public facts, revise the homepage and two service pages, map the inquiry process, and measure a baseline.
Days 31–60	**Own and test.** Take over two routines, specify an inquiry form with a location field, and test the AI step on real inquiries, with names removed and the team checking the answers.
Days 61–90	**Pilot and decide.** Run a limited AI-assisted triage pilot with every reply approved by a person, review time, corrections, and cost, then recommend whether to expand, adjust, or stop.

The honest limit

The practice messages were ones I wrote myself. Before anyone relies on the AI step, I'd test it on your real inquiries, with your team checking the answers. If it doesn't meet the bar we agree on, it doesn't go live.

How we'll judge the work

Median time to the first human response, handoff completeness, follow-up coverage, and handling time including review and corrections, all measured against the day-30 baseline.

The decision to make together

Choose one initial assignment, agree paid hours and compensation, name the approval contact, and set the first review date. A 30-minute conversation is enough to decide whether this role fits.

All example inquiries are fictional, and nothing in this proposal connects to company systems. This is an independent proposal, not an official company publication.
