PREPARED FOR THE OWNERS · 1 NOVEMBER 2026

SYSTEM SOLUTIONS PROS

Website improvement and support role proposal

A practical improvement plan.
A focused way to start contributing.

A public website improvement plan with visual examples, 38 priorities, and a practical 30/60/90-day plan for beginning a focused website and office support role.

Make the offer clear

Lead with electrical and low-voltage work, then help each customer find the right service.

Make the next step easy

Connect useful service pages, credible project proof, and a simple inquiry form.

Make upkeep manageable

Give public information a clear owner and provide reusable office templates.

Prepared from public pages and public records. Clerical recommendations are proposed practices for the owners to adapt.

02 / Proposed starting role

03 / 30/60/90-day plan

06 / Website recommendation

10 / Proposed visual changes

17 / Clerical improvements

23 / Owner decisions

Bring experience to a practical starting role

I would like to bring my experience to System Solutions Pros through a focused role supporting the website and day-to-day office work. I am comfortable starting with the fundamentals, understanding how your business operates, and taking ownership of useful improvements.

Proposed initial scope

Website and Office Support
Improve public information, prepare useful website content, organize agreed administrative tasks, and keep follow-ups and decisions visible.

Where I would contribute first

- Turn the public audit into a prioritized, actionable work list.
- Draft clear service copy and coordinate factual approvals.
- Organize approved project information into useful case studies.
- Adapt messages, checklists, and records to the existing workflow.
- Track agreed deliverables, decisions, and next actions.

How I would approach the role

- Understand what already works and where help is most useful.
- Agree priorities and decision authority with the owners.
- Take ownership of defined work and communicate progress.
- Ask targeted questions when company-specific facts are unclear.
- Recommend additional responsibility when the results and business needs support it.

A manageable way to begin working together

The first assignments would establish how I can contribute within your business. Starting with concrete website and office tasks gives us a practical way to align expectations, produce useful work, and identify where my broader experience can help.

This report provides starting material: a public audit, visual concepts, draft copy, and reusable templates. I would validate the business details with you, adapt the material to your priorities, and coordinate implementation within the agreed responsibilities.

> **What I am proposing:** a paid position with a focused initial scope, agreed hours and decision authority, and reviews at 30, 60, and 90 days. We would discuss compensation in relation to my experience and the responsibilities we agree.

The role and title are proposed for discussion. Website publishing, technical scope, and customer commitments follow the owners' authorization and the company's existing arrangements.

Establish fit, deliver improvements, and build on results

The first 90 days would combine company-specific orientation with tangible delivery. The scope can be adjusted to agreed hours, available information, and the owners' priorities.

DAYS 1–30

Understand the operation and complete the first improvements

Establish: the business's priorities, service scope, customer routes, approval process, and the responsibilities I will own.

Deliver: a working public facts register, revised homepage copy, drafts or briefs for two priority services, and a ranked list of corrections ready for approval.

Coordinate: required owner decisions and any changes the authorized website provider needs to publish.

Day-30 review: assess the usefulness and accuracy of the work, identify constraints, and agree the next priorities.

DAYS 31–60

Own agreed routines and improve the handoffs

Establish: responsibility for two selected recurring tasks, such as public-content maintenance and document follow-up. Internal duties depend on the role and permissions agreed after hiring.

Deliver: an up-to-date change log, three adapted templates or checklists, one project story if approved material is available, and a clear specification for the revised inquiry form.

Coordinate: how requests move between the website, office staff, and the people who make technical or commercial decisions.

Day-60 review: check whether the routines are useful, consistently maintained, and reducing identified points of confusion or repeated work.

DAYS 61–90

Maintain the improvements and propose the next scope

Own: the agreed routines, weekly priorities, and a monthly public-information review.

Deliver: a completed-work summary, short instructions for recurring tasks, remaining decisions, and a prioritized recommendation for the next period.

Coordinate: handoffs and coverage so the work remains understandable to the wider team.

Day-90 review: assess results and role fit, then agree ongoing responsibilities, any expansion in scope, and the corresponding hours or compensation discussion.

Evidence of value

Accepted deliverables, resolved public issues, usable records, clearer handoffs, and owner feedback. Any time savings should be measured against an agreed baseline.

Dependencies stay visible

Identify missing facts, permissions, approvals, or provider work early. Agree a substitute task where appropriate and report blocked items accurately.

> The full 38-action roadmap guides longer-term website work. The first 90 days focus on the agreed initial scope, with publishing and specialist implementation coordinated through authorized people.

Start with clear priorities and useful deliverables

Agree a point of contact, a defined first scope, and the decisions needed to move work forward. Use the opening weeks to understand the company and begin delivery.

WORK PERIOD	MY ASSIGNMENT	REVIEWABLE OUTPUT
Days 1–2	Confirm service priorities, customer routes, and current responsibilities. Review the proposal with the owners and select the three most useful initial tasks.	A one-page scope agreement, decision contacts, and a short list of factual questions.
Days 3–5	Validate public facts against approved wording. Prepare the homepage revision and organize the first corrections for review.	Facts register, homepage copy draft, correction list, and weekly status update.
Days 6–8	Incorporate feedback. Prepare a priority service brief and adapt one office checklist or message to the actual workflow.	Revised content, service brief, and a practical reusable template.
Days 9–10	Check the work, separate completed items from pending decisions, and agree the next two weeks' delivery priorities.	A clear handoff with versions, decision owners, and next actions.

Suggested weekly rhythm

Align priorities

Confirm two or three deliverables, due dates, and approval needs. Account for urgent operational work.

Deliver and coordinate

Complete the work, resolve questions, and flag dependencies early. Keep nonurgent decisions in a concise review list.

Review outcomes

Provide a short status update and a suggested 15-minute check-in. Adjust priorities from the results.

My weekly update would answer four questions

> **Completed:** [deliverable and reference]
>
> **Decision needed:** [question, recommendation, and effect on the work]
>
> **Next:** [deliverables and due dates]
>
> **Dependency or improvement:** [missing input, process issue, or proposed adjustment]

"Day" means a scheduled workday. Actual hours and workload would be agreed with the owners. Orientation would cover the company's systems, procedures, service details, and decision authority.

Agree responsibility and assess the results

What I would be accountable for

- Delivering the agreed work accurately and on schedule.
- Organizing records, versions, and next actions.
- Communicating progress and dependencies clearly.
- Respecting company information and decision authority.
- Identifying practical improvements and following through.

What enables delivery

- Clear priorities and an agreed point of contact.
- Company-specific facts, procedures, and required permissions.
- Defined approval and publishing responsibilities.
- Timely decisions at agreed checkpoints.
- A shared understanding of the role's hours and scope.

Responsibility boundaries

WORK I CAN OWN WITHIN SCOPE	COORDINATION AND DECISION AUTHORITY
Website content, issue tracking, and project summaries	Owners confirm business facts and publication permissions. Technical implementation follows the agreed website arrangements.
Approved messages and assigned follow-up records	Customer communication follows the company's standards and the authority assigned to the role.
Estimate information and document handoffs	Estimators and owners retain authority for technical scope, pricing, commitments, and approvals unless otherwise agreed.
Additional operational duties	Any wider duties are agreed according to the business need, relevant qualifications, and required authorization.

A practical review scorecard

REVIEW AREA	EVIDENCE TO DISCUSS AT DAYS 30, 60, AND 90
Delivery	Agreed outputs completed; dependencies and changes handled promptly.
Accuracy and usefulness	Approved facts used consistently; materials accepted and useful to their intended users.
Organization and ownership	Current records, clear versions, reliable next actions, and complete handoffs.
Communication and judgment	Concise updates, appropriate decisions, and timely escalation of unresolved issues.
Business fit and improvement	Work supports the owners' priorities and provides evidence for the next improvement.

Review outcome: record what is working, what needs adjustment, and what scope should come next. Use examples and agreed measures. Sales totals, search rankings, and customer decisions depend on several factors and should be assessed in context.

The report remains an outside review. Internal responsibilities are future possibilities after hiring and agreement on the role; preparing this proposal requires no internal access.

Make the business clear before adding more pages

How I would support this plan: prepare content, maintain approved public facts, coordinate website improvements, and own agreed office support tasks. The preceding role plan defines my proposed first 90 days.

The first investment should connect the company’s identity, service pages, and contact process. Every later improvement will work better when those foundations agree.

Recommended direction

Present System Solutions Pros as an electrical and low-voltage contractor. Give commercial, low-voltage, and residential customers clear routes. Support those routes with specific service information and real project evidence.

01 Settle the business facts

Confirm the preferred services, coverage, public credentials, contact details, and the meaning of project and experience totals.

02 Rewrite the opening screen

State what the company does, who it helps, and where it works. Keep one primary project inquiry action and a visible phone option.

03 Connect each service to a useful destination

Replace repeated general destinations with relevant sections first, then publish dedicated pages for priority work.

04 Make inquiries easier to assess

Collect service, city or ZIP, project details, and a usable reply method. Explain the next step and separate emergency calling from ordinary estimates.

05 Build proof and a repeatable maintenance routine

Add permitted project photos, clear case studies, sourced credentials, and a small set of reusable records.

What success looks like

A new visitor can identify the business, find the relevant service, check the service area, and understand how to start a conversation. Staff can keep public facts consistent with less repeated writing.

How to read this proposal

Observed means visible in public sources. **Proposed** means a recommended change. **Confirm** means the owners hold the answer. Priority reflects the customer journey and dependencies, not measured lost revenue.

Scope: This review covers the public website and public listings. It does not inspect private tools, customer records, inboxes, analytics, or internal processes. No live website edits or customer messages are included in this report.

What the public pages show

These observations explain the highest-priority changes. The proposed layouts later in the report show how those changes would appear.

OBSERVED	CUSTOMER CONSEQUENCE	RECOMMENDED CHANGE
The first headline is “Licensed. Insured. Done Right.” Homepage	It establishes a trust theme but does not name the work.	Put the business definition in the headline; move verified credentials into supporting proof.
Featured service links lead to the same general service page. Homepage	A visitor must search again for the service they chose.	Use specific destinations and descriptive link labels.
Project counters show 50+ on Home and 500+ on About. Homepage, About	The difference in date or scope is unexplained. Both minimums could be true.	Use one documented count, or label company projects and combined career experience separately.
Coverage wording ranges from Central Florida to statewide; LinkedIn names narrower regions. Homepage, Company LinkedIn profile	Visitors cannot confidently judge geographic fit.	Publish confirmed areas and explain any service-specific travel limits.
The inquiry form has no visible city or ZIP field. Contact	Location may require another exchange before assessing fit.	Add one location field and make the preferred reply method clear.
Footer Privacy and Terms links returned Home when followed in the public-page check. Homepage	The named documents were not reached.	Link to actual approved pages and verify the routes in a browser.
Copy includes “Industry Experiance” and “across throughout Florida.” About, Services	Editing errors interrupt an otherwise professional impression.	Proofread all templates, pages, and repeated footer text.

Useful material already exists

The public pages contain service descriptions, contact routes, and credential information. The redesign can organize and verify that material before commissioning a larger content library.

Checks still to perform

This report does not assign a speed score, accessibility score, conversion rate, or form-delivery result. Those require separate testing; the proposed acceptance checklist appears on page 22.

Give every public claim a clear meaning

Create one approved fact sheet so the website, profiles, estimate language, and future updates draw from the same information.

CONFIRM / SCOPE AND HISTORY

Company age and experience

Separate years the company has operated from the team's combined experience. Give project totals a scope and a review date. The public About page mixes experience and completed-work statistics. About

Record: approved wording, evidence held by the owner, review date, and where the wording appears.

OBSERVED / DATED PUBLIC RECORD

Electrical contractor credential

The DBPR page timestamped September 23, 2026 lists EC13012352 as current and active, under John G. Melito with DBA System Solutions Pros, LLC. Florida DBPR license record

Record: exact credential description and a fresh owner check before publication.

CONFIRM / OTHER CLAIMS

Specialty and partner statements

ES12002124, dealer authorization, union affiliation, technician qualifications, insurance, and bonding claims need precise supporting wording. This review did not independently establish those details. About, Services

An unverified item is a question to resolve, not evidence that the claim is wrong.

CONFIRM / CONTACT EXPECTATIONS

Office hours and emergency response

Weekday office hours and round-the-clock emergency availability can coexist. Explain the emergency number, geographic availability, and what callers can expect. Keep response wording consistent. Contact

Record: ordinary contact hours, emergency call path, and any owner-approved response promise.

OBSERVED / DIRECTORY MISMATCH

Public phone number

The website displays (727) 761-7767; SignalHire displays (727) 514-8766. The directory may be stale. Confirm the preferred number and correct accessible listings. Contact, SignalHire listing

Record: business number, email, website URL, and owned profile links.

CONFIRM / PROOF

Ratings and project material

Any rating needs an identifiable source, review count, and checked date. Project photos and customer quotations need permission and accurate attribution. Avoid unsupported superlatives.

Record: source link, approved excerpt or image, permission scope, and publication date.

Included: an editable public claims register with 13 topics. Its verification column keeps a documented observation separate from the owner's answer. No private evidence needs to be shared with the outside reviewer.

Let the first screen explain the company

PROPOSED COPY / FOR OWNER REVIEW

Business definition

System Solutions Pros provides electrical and low-voltage installation, upgrades, and service for commercial, industrial, and residential properties.

CURRENT HEADLINE

Licensed. Insured. Done Right.

A broad assurance. The specific business offer appears later.

PROPOSED HEADLINE

Electrical and low-voltage systems for businesses and homes.

The business is identifiable in the first sentence.

Proposed supporting copy

From commercial electrical projects and building communications to home power upgrades, System Solutions Pros helps customers plan their next installation or improvement.

Location line: Serving [confirmed primary region]. View service areas.

Main action: Discuss Your Project **Secondary action:** Call (727) 761-7767

The phone shown is the current website number. Confirm it before implementation. Replace the location placeholder with approved wording.

Three clear entrances below the headline

Commercial and industrial

Build-outs, new construction, service upgrades, and power distribution.

Link: Explore commercial electrical.

Low voltage and building systems

Structured cabling, access control, surveillance, and fire alarm services where offered.

Link: Explore low-voltage systems.

Residential electrical

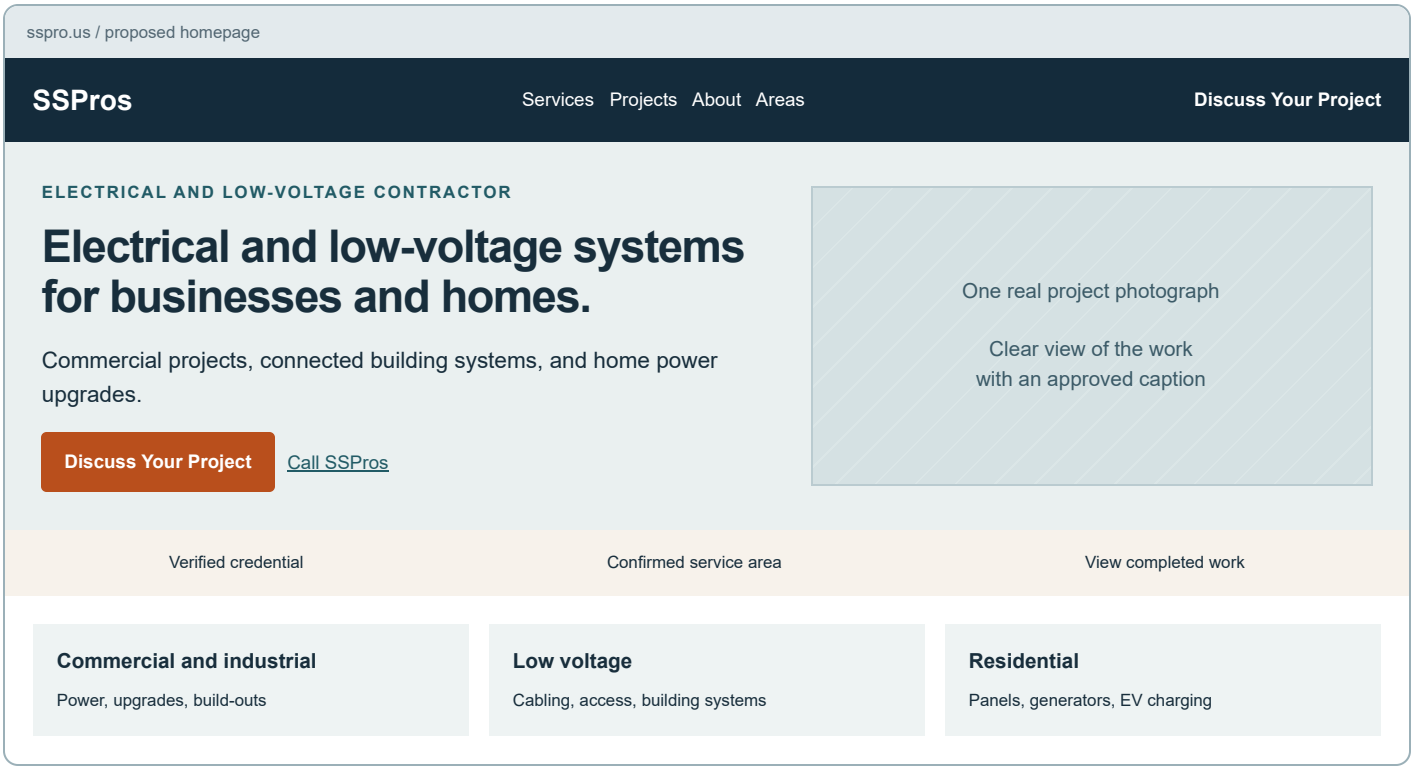

Generators, panel upgrades, EV charging, and other confirmed home services.

Link: Explore home electrical.

Positioning decision: Commercial work is shown first because the current Services page leads with it. That is a proposed emphasis, not a conclusion about revenue or capacity. The owners can reorder the same three routes to match the work they want.

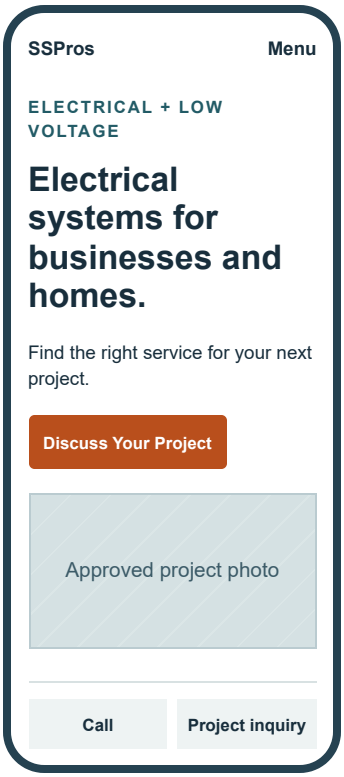

The proposed homepage, on desktop and phone

Illustrative wireframes. The rectangles show placement and content; they are not screenshots of a finished website. Photography and business claims remain subject to owner approval.

What physically changes

1. **The business moves into the headline.** Trust language supports the offer below it.
2. **One real image anchors the first screen.** Avoid a rotating slideshow or decorative video that competes with the message.
3. **Services become three obvious paths.** Each card opens relevant information.
4. **Projects move ahead of broad claims.** Add two or three approved examples, then a short explanation of the process.
5. **Contact stays within reach.** On mobile, a compact bottom bar offers calling and project inquiry without covering page content.

Homepage order after the first screen

Selected projects → how a project starts → company introduction → service-area summary → final inquiry action → complete footer.

Use clear type, consistent spacing, and the existing brand identity where it is usable. The navy, teal, and warm accent in this report demonstrate hierarchy; final colors require a brand and contrast check.

Turn a service choice into a useful conversation

1. Choose a service	2. Understand the work	3. See evidence	4. Make contact
Homepage or service hub	Specific scope and answers	Relevant project example	Service carried into the form

SERVICE PAGE EXAMPLE

Commercial build-outs and tenant improvements

Open with who the work is for and what the company can help deliver.

When to contact us
New space, changed layout, or electrical capacity needs.

Scope to discuss
Plans, existing conditions, electrical scope, coordination, and timing.

Relevant completed project
Need → work performed → documented outcome.

Common questions
What information helps an estimate? How are site visits arranged? What affects the schedule?

Discuss a Build-Out

Do not promise a permit scope, fixed price, or completion date unless it matches the owners' actual offering.

Require the selected contact method

Project details *
What work is needed? Timeline is optional.

Send Project Details

Link to the actual privacy notice beside the form.

Confirmation and errors

Keep entered details if validation fails. Explain each field error in text. Display a successful submission message only after the form system accepts the request; give the next step without implying an appointment is booked.

Separate emergency help

Show the confirmed emergency calling route beside the form. State that the ordinary inquiry form is not an emergency dispatch channel. The owners should confirm availability and response wording.

Build the pages in a useful order

Keep navigation short: Services, Projects, About, Service Areas, and Contact. Give the main project inquiry action a consistent position.

PAGE OR TEMPLATE	WHAT THE PAGE MUST CONTAIN	RELEASE APPROACH
Home	Business statement, three service routes, relevant proof, contact action, service-area summary.	First release.
Services overview and three family pages	Who each family serves, available work, links to detailed pages, and a next step.	Use meaningful page sections immediately; expand into hubs as content is ready.
Six initial detailed service pages	Proposed candidates: commercial build-outs, power/service upgrades, structured cabling, fire alarms, generators, and panel upgrades.	Choose order by owner priorities and confirmed scope. Use one reusable template.
Projects index and case studies	Filter or label by service. Each story explains the customer need, scope, constraints, and result.	Aim for three approved examples. Publish fewer if evidence is limited.
About	Factual company history, responsible people, verified credentials, and a link to completed work.	First release.
Service Areas	Actual geographic coverage, any variation by service, and an inquiry route for uncertain locations.	First release. Add town-specific pages only when they contain genuinely useful local content.
Contact and emergency panel	Short form, phone and email, ordinary hours, separate emergency information, confirmation and error states.	First release with delivery verified by the authorized provider.
Privacy and other relevant policies	Approved wording reflecting the actual collection and use of information.	Working destinations before launch. Avoid publishing generic policy promises.

Keep useful existing addresses

Retain current URLs where practical. If a page moves, map the old address to the most relevant new one. Update navigation, internal links, and the sitemap together.

Plan expansion around demand

EV charging, surveillance, access control, additional industries, and more case studies can follow once the core route works and the owners can support the content.

Page-count discipline: The candidate service list is a scoping tool, not a requirement to launch every page at once. A small set of accurate, complete pages should establish the structure for future additions.

Establish the business and contact path

Priority 1 / Resolve these dependencies before expanding the website.

01 Approve the business definition

Agree on the main offer, preferred customer groups, and service order. Use the definition on Home, About, and public profiles.

Complete when: One message sheet records the approved wording and scope.

02 Create the public fact sheet

Resolve project-count labels, company age versus experience, credentials, ratings, service claims, and contact details.

Complete when: Each published claim has a source or an owner confirmation and a review date.

03 Define the service territory

List actual locations served and any differences between routine, commercial, and emergency work.

Complete when: Coverage wording matches across the website and owned profiles.

04 Rewrite the homepage opening

Use the proposed business-led headline, short support copy, primary inquiry action, and visible phone option.

Complete when: Visitors can identify the business and next step from the first screen.

05 Simplify navigation

Build consistent desktop and mobile menus using familiar labels and a visible contact action.

Complete when: Every main destination is reachable without deciphering company jargon.

06 Create three service entrances

Separate commercial/industrial, low-voltage systems, and residential routes, in the approved order.

Complete when: Each route explains who it serves and leads to relevant work.

07 Replace generic service destinations

Point each featured service to its own useful section or page. Use labels that name the destination.

Complete when: Every featured card reaches the service it advertises.

08 Improve the inquiry form

Add city or ZIP, service, short project details, and the selected reply method. Make optional fields visibly optional.

Complete when: Required fields support initial triage; errors preserve the visitor’s work.

09 Make mobile contact easy

Use tappable contact links and a compact call/inquiry control with enough room around it.

Complete when: Controls remain usable without obscuring content or the keyboard.

10 Verify the complete contact route

The provider tests submission, storage or delivery, duplicate handling, success state, and failure state. The owner confirms receipt.

Complete when: A documented test reaches the intended destination; no delivery claim rests on a screen message alone.

Add the detail that helps customers decide

Priority 2 / Build useful service information and credible project proof.

11 Clarify emergency contact

Give urgent callers an explicit calling route, actual availability, and suitable expectations.

Complete when: Ordinary estimates and emergency calling are visibly distinct.

12 Repair policy and trust links

Replace footer routes that return Home with working, appropriate policy destinations.

Complete when: Every footer label opens its named content.

13 Build the three service hubs

Give each family an overview, work categories, relevant proof, common questions, and a contact action.

Complete when: Visitors can compare the options within the family they selected.

14 Write priority service pages

Use one template: need, scope, process, evidence, questions, coverage, and next action.

Complete when: Each page contains useful service-specific information and a relevant inquiry route.

15 Explain scope and the project process

Describe what information starts an estimate, when site review is needed, and how next steps are confirmed.

Complete when: The website avoids implying a fixed price or booking before assessment.

16 Use real company photography

Collect approved images of work, people, and equipment; write accurate captions and useful alternative text.

Complete when: Images are relevant, permitted, and sized for the page.

17 Publish a project portfolio

Group completed work by service and link from related service pages.

Complete when: Customers can find an example relevant to the work they need.

18 Write credible case studies

Document the original need, constraints, work, and outcome. Use measured results only when recorded.

Complete when: Each story has approved facts and photo/customer permissions.

19 Source ratings and testimonials

Show the platform, count, and date for any rating. Attribute quotations and retain permission where required.

Complete when: Every testimonial can be traced to its source without implying unsupported results.

20 Introduce the people and company

Replace broad promotional history with approved company facts, people, responsibilities, and useful credentials.

Complete when: About explains who stands behind the work and links to evidence.

Make the site consistent and easier to use

Priority 3 / Apply a shared design, accurate facts, and discoverable content.

21 Standardize the credential section

Use the same approved license wording, number formatting, and evidence links throughout.

Complete when: No page introduces a broader claim than the approved fact sheet.

22 Publish the Service Areas page

Use a readable list or accessible map with a text equivalent. Explain any differences by service.

Complete when: A visitor can determine whether to inquire without assuming statewide dispatch.

23 Answer common service questions

Cover estimate preparation, site access, coordination, service fit, and next steps using approved answers.

Complete when: Answers are specific enough to reduce repeated basic questions.

24 Proofread every page

Correct typos, inconsistent capitalization, repeated claims, and conflicting response language.

Complete when: A full-page and repeated-template copy review is signed off.

25 Create a consistent visual system

Set typography, spacing, button styles, cards, colors, image ratios, and form states.

Complete when: The same type of information looks and behaves consistently.

26 Refine phone and tablet layouts

Check long titles, cards, tables, menus, image crops, and the on-screen keyboard.

Complete when: No sideways page scrolling or hidden content at intended viewport sizes.

27 Build and test accessibility

Use semantic headings, visible labels, keyboard focus, sufficient contrast, useful alt text, and accessible errors.

Complete when: Evaluate the release against WCAG 2.2 AA with automated and manual checks.

28 Write useful search titles

Give each important page a descriptive title and concise summary consistent with its content and approved locations.

Complete when: Search snippets identify the service and business without repetitive keyword stuffing.

29 Add accurate business data

Implement appropriate structured data only where accurate public business details support it.

Complete when: Markup validates and agrees with visible page content; no fabricated rating markup.

30 Align public business profiles

Use the approved business description, service categories, number, URL, and service coverage on controlled profiles.

Complete when: Owned profiles agree; external correction requests are tracked separately.

Implementation references: W3C WCAG 2.2 and Google local business documentation. These are design and implementation targets; this report does not certify conformance or promise search placement.

Verify the release and keep it current

Priority 4 / Test the implementation, then maintain it with clear ownership.

31 Improve image delivery

Resize and compress images, provide suitable formats, reserve image space, and defer images below the first screen.

Complete when: Project imagery stays sharp without unnecessary download weight or layout jumps.

32 Check indexing and redirects

Review public crawl settings, sitemap, canonical addresses, internal links, and a relevant redirect map.

Complete when: Important public pages are discoverable and old links reach the right destination.

33 Measure and improve performance

Check representative pages under mobile conditions; address heavy media, blocking assets, and slow interactions.

Complete when: Record before/after lab results; use real-user measures when enough data exists.

34 Complete functional launch checks

Test menus, buttons, contact links, form states, HTTPS behavior, and public errors. Provider checks spam defenses and update readiness.

Complete when: The public checklist passes and the provider records private checks and recovery steps.

35 Measure meaningful contact actions

Define events for successful form acceptance and phone/email clicks, where appropriate and configured by the provider.

Complete when: Reports label clicks as intent; they do not count them as completed calls or sales.

36 Review inquiry fit by service

Offer a blank log for service, region, source, outcome, and next action. Staff decide whether to adopt it.

Complete when: A consistent record can show which inquiries fit the work the owners want.

37 Review results after launch

Compare a baseline with later periods, including volume, fit, and known seasonal or marketing changes.

Complete when: Changes are judged from evidence, with no invented percentage-growth promise.

38 Assign ownership for upkeep

Name who updates public facts, content, forms, profiles, and technical maintenance, with a recurring review date.

Complete when: Each recurring task has a responsible person and a next review date.

> **Priority is a delivery sequence, not permission to postpone quality:** accessibility, responsive behavior, working links, and form validation belong in each page as it is built. Performance targets should follow Google Web Vitals guidance; no current performance score is asserted here.

How the earlier audits connect

The business-definition and opening-screen recommendations now form actions 1–7. Service depth and trust become actions 11–24. Design and discovery become actions 25–33. Contact verification, maintenance, and measurement are carried through actions 10 and 34–38.

Practical records the owners can choose to use

These are optional improvements, not findings that the current office is disorganized. The templates can be adapted to the tools the business already uses.

01 / Maintain a public facts register

Proposed practice: Keep one row per claim, with the source, approved wording, owner, and review date. Use it before updating any page or profile.

Why it helps: Fewer contradictory public statements and easier content approval.

Prepared material: Populated public claims CSV; blank service/coverage register.

02 / Use a short inquiry record

Proposed practice: Capture the service, city or ZIP, reply details, owner, status, next action, and due date. Avoid collecting details that are not needed at first contact.

Why it helps: Less repeated information gathering and clearer handoffs, if the owners adopt the process.

Prepared material: Blank inquiry tracker and field guide.

03 / Give every open inquiry a next action

Proposed practice: Use a small set of statuses and one accountable person. A due date means the staff have chosen when to follow up; it is not a public response guarantee.

Why it helps: An open item can be reviewed without searching several conversations.

Prepared material: Status definitions and daily/weekly review checklist.

04 / Standardize routine writing

Proposed practice: Prepare short drafts for acknowledgement, missing details, estimate follow-up, scheduling confirmation, and review requests. Staff personalize and send them.

Why it helps: Less rewriting and more consistent expectations.

Prepared material: Five editable message templates.

05 / Keep public listings aligned

Proposed practice: Record the public name, website, phone, description, hours, and coverage for each controlled profile. Log correction requests for third-party sites.

Why it helps: Directory differences become a manageable checklist.

Prepared material: Public copy/change log and approved-facts checklist.

Carry the same clarity into estimates and closeout

Keep each record small, useful, and assigned to someone. Introduce the templates that remove a specific repeated task before adding more administration.

06 / Use an estimate preparation checklist

Proposed practice: Record the request, site conditions, assumptions, exclusions, access needs, and questions for the estimator. Keep version numbers and dates clear.

Why it helps: The estimator receives a more complete brief and can spot missing information.

Prepared material: Estimate brief and follow-up tracker; no pricing rules are prescribed.

07 / Create a consistent job handoff

Proposed practice: Use a shared project identifier and checklist for approved scope, contacts, schedule, access, changes, and completion documents.

Why it helps: The next person can see what is agreed and what still needs confirmation.

Prepared material: Project folder example and handoff checklist for internal adoption.

08 / Make document follow-up visible

Proposed practice: Keep a checklist of outstanding approvals, change confirmations, completion documents, and invoice-status questions for the responsible staff member.

Why it helps: Administrative questions can be routed to the right person without assuming the work is complete or paid.

Prepared material: Blank handoff and document-status fields; owners retain their accounting process.

09 / Capture project proof and permissions

Proposed practice: At closeout, record the work performed, approved images, customer wording, and what may be published. Keep photo and testimonial permissions specific.

Why it helps: Finished work can become useful website content with less later reconstruction.

Prepared material: Project evidence CSV and case-study worksheet.

10 / Review a small monthly summary

Proposed practice: Record public-site corrections, new proof, open follow-ups, and optional inquiry totals. Note what is unknown and assign the next action.

Why it helps: The website stays current and recurring office tasks have a visible owner.

Prepared material: Monthly review CSV with metric definitions and blank results.

Give each inquiry a status, an owner, and a next step

The website collects the initial facts. An optional office routine carries those facts forward without making the customer repeat the same introduction.

STAGE	MINIMUM RECORD	NEXT ACTION
New inquiry	Date, source, service, location, reply method, brief description.	Assign a person to assess fit.
Reviewing fit	Service/coverage fit, missing details, urgency, responsible person.	Request details, arrange assessment, or close with a reason.
Preparing estimate	Site information, scope questions, estimate version, target follow-up date.	Estimator confirms scope and sends approved estimate.
Estimate sent	Sent date, latest version, agreed next contact, customer response.	Follow up at the chosen time or record the decision.
Accepted and scheduled	Written scope approval, site contact, access, schedule, outstanding documents.	Hand off to the responsible project person.
Closed	Won, lost, unsuitable, or no response; reason where known.	Complete records and request permitted feedback after suitable closeout.

Daily review · suggested

- Review new items and assign responsibility.
- Check follow-ups due today.
- Update status after a conversation.
- Give every open item a specific next action.

Weekly review · suggested

- Review overdue or unassigned items.
- Resolve unclear scope or missing documents.
- Identify repeated questions the website could answer.
- Close stale items using an agreed reason.

The tracker stays deliberately simple

The included blank CSV uses 17 fields. Its essential review columns are **Status, Assigned To, Next Action, and Next Action Due**. Store it only in an owner-controlled location if it later contains customer data. Do not publish it with the website.

> **Automation comes after the routine:** a future form-to-record connection or reminder can be evaluated by the owners and their provider once the fields and responsibility are clear. The present package supplies blank records and instructions; it does not connect to internal systems.

Short templates that set clear expectations

Illustrative drafts. Replace bracketed fields, confirm the facts, and send through the business's normal process. No messages have been sent.

1 / Acknowledge an inquiry

> Hi [Name], thanks for contacting System Solutions Pros about [service] in [city]. We've received your details and will review the project information.
>
> [Responsible person] will follow up by [confirmed date/time] about the next step. An appointment is confirmed once we agree on the details with you.

2 / Request missing information

> Hi [Name], to assess your project, could you send [specific missing information]? Please also confirm the project city or ZIP and the best way to reach you.
>
> Once we have that information, we can advise on [site review / estimate preparation / the appropriate next step].

3 / Follow up on an estimate

> Hi [Name], I'm following up on estimate [reference/version] for [brief scope], sent on [date]. Do you have any questions about the scope or next steps?
>
> If your plans or timing have changed, let us know so we can keep our records current.

4 / Confirm an agreed appointment

> Hi [Name], this confirms the [site visit / agreed work] for [date and arrival window] at [location]. The site contact is [name and number].
>
> Please confirm [access arrangements or preparation]. If anything changes, contact [business contact]. The agreed purpose of this visit is [purpose].

5 / Ask for an honest review

> Hi [Name], thank you for choosing System Solutions Pros for [project]. If you would like to share your experience, you can leave an honest review here: [approved review link].
>
> If you have a question about the completed work, please contact [business contact].

Offer review requests consistently to eligible customers; avoid incentives or selecting only customers expected to leave positive feedback. See Google's review policies. Photo or testimonial reuse requires a separate, specific permission record.

Deliver in stages the owners can review

Use completion gates to control scope. Final dates and fees should be quoted once the chosen page count, publishing platform, and available content are confirmed.

STAGE 1

Approve the facts and direction

Deliver: business definition, service order, territory wording, claims register, page map, and selected first-release pages.

Owner input: resolve business facts privately and return approved public wording.

Gate: no unresolved factual claim is presented as approved copy.

STAGE 2

Finish copy and visual layouts

Deliver: desktop/mobile Home, service template, Contact states, About/Areas outline, reusable components, and an initial content set.

Owner input: choose the direction and provide permitted photos or approve a photo plan.

Gate: every first-release page has content, a purpose, and a next action.

STAGE 3

Build and verify the first release

Deliver through the authorized provider: responsive pages, correct routes, working form behavior, policy destinations, redirects, and basic search setup.

Owner/provider input: publish through their existing access, confirm receipt of test inquiries, and record a recovery plan.

Gate: the agreed acceptance checklist passes before release.

STAGE 4

Add depth and adopt useful templates

Deliver: additional service pages and approved case studies; adapt the selected clerical records to the existing office routine.

Owner input: select a record owner and decide which templates solve a real repeated task.

Gate: each added page has unique value; each adopted record has a user and a purpose.

STAGE 5

Review and maintain

Deliver: public link/content recheck, a list of corrections, and a monthly review routine. Provider and staff can add private metrics if they choose.

Gate: recurring tasks have owners, review dates, and recorded next actions.

Responsibilities: Outside support prepares public research, copy, layouts, and blank templates. Owners approve business facts and decide operational practices. Their authorized website provider builds, publishes, and performs private delivery and technical checks.

Check the experience and measure the right things

Public website acceptance

- [ ] The first screen states the business and a clear next step.
- [ ] Featured service links reach the promised information.
- [ ] Contact and coverage information agree across pages.
- [ ] Phone links, navigation, footer links, and redirects work.
- [ ] Mobile layouts do not hide content or cover form controls.
- [ ] Form labels, errors, keyboard focus, and heading order are usable.
- [ ] Project proof and public claims have approved wording.
- [ ] No template placeholders or unapproved claims remain.

Provider and owner acceptance

- [ ] A permitted test request reaches the intended private destination.
- [ ] Failure and duplicate submissions are handled sensibly.
- [ ] Spam protection and secure form handling are checked.
- [ ] Public policies match the actual form and tracking behavior.
- [ ] URLs, indexing settings, and business markup are reviewed.
- [ ] Backups, deployment recovery, and maintenance responsibility are documented.
- [ ] The staff know where inquiries arrive and who acts on them.

A useful measurement plan

MEASURE	DEFINITION	WHO CAN VERIFY IT
Successful form requests	Accepted submissions, deduplicated and screened for spam where possible. Keep click counts separate.	Provider and staff.
Qualified inquiry share	Inquiries that match agreed service and coverage criteria ÷ inquiries assessed. Note unassessed items separately.	Owner-selected staff.
First personal response	Time from receipt to the first staff response; specify business-time or elapsed-time measurement.	Staff using their own records.
Estimate outcomes	Accepted, declined, and pending estimates tracked by sent-date group and service. Do not treat pending as lost.	Owners or estimating staff.
Public quality	Broken links, stale facts, incomplete pages, and new approved project examples.	Outside reviewer or provider.

Implementation targets: assess accessibility against W3C WCAG 2.2. For real-user performance, Google's "good" thresholds are LCP ≤ 2.5 seconds, INP ≤ 200 milliseconds, and CLS ≤ 0.1 at the 75th percentile. Lab tests support diagnosis; they are not proof of field performance. Google Web Vitals guidance

No baseline, revenue impact, or uplift percentage is claimed. Start with consistent definitions, gather a baseline where data is available, and compare later periods while noting seasonality and marketing changes.

Make the first release concrete

The recommended first release fixes the business message and contact journey, then adds the strongest content the owners can support.

Recommended initial commitment

- Approved fact sheet and business definition.
- Revised Home, About, Areas, and Contact.
- Clear service-family routes and a reusable detailed-service template.
- Working policy destinations and relevant redirects.
- Initial approved project examples, where available.
- Responsive and accessibility checks, plus verified inquiry delivery by the provider.
- Named maintenance responsibilities.

Later additions to evaluate

- More detailed service and industry pages.
- A larger project library.
- Additional useful location content.
- Owner-selected reminders or record integrations.
- Ongoing content production and measurement.

Paid advertising, a customer portal, bespoke quoting software, and a broad software migration would need separate objectives and scope.

Decisions for the owners

Employment proposal: consider the support role on pages 2–5, agree the initial scope and decision authority, and discuss paid hours, compensation reflecting the role and experience, a start date, and the 30/60/90-day review schedule.

- ☐ **Business focus:** which customers and services should the first screen emphasize?
- ☐ **Territory:** which areas are served, and does availability vary by service?
- ☐ **Public facts:** which counts, credentials, affiliations, and response promises can be supported?
- ☐ **Proof:** which photos, projects, and customer comments may be published?
- ☐ **First release:** which detailed service pages are most useful now?
- ☐ **Responsibilities:** who approves content, publishes changes, responds to inquiries, and maintains records?

What a provider’s quote should specify

List page and template counts, copywriting responsibilities, image preparation, revision rounds, form functionality, redirect work, accessibility checks, launch testing, handover, and maintenance. Separate one-time work from recurring hosting, software, and support costs. Identify any optional integration as a separate item.

Start with clarity and a complete contact path.

Once the facts, service routes, and next step agree, the site can grow through real projects and useful service information. That gives the owners a manageable foundation for future improvement.

Evidence and a toolkit that can be reused

Public pages reviewed for this proposal on November 1, 2026. Retrieved pages may be cached; the DBPR page carries its own September 23, 2026 timestamp. Recheck time-sensitive facts before publishing revised copy.

Homepage

Opening message, service destinations, counters, public contacts, and footer routes.

Services

Service families, scope descriptions, partner wording, and emergency presentation.

About

History, experience/project presentation, credentials, and company claims.

Contact

Public form fields, reply wording, office hours, and emergency availability.

Company LinkedIn profile

Public company description and stated geographic emphasis; channel positioning context.

Florida DBPR license record

Dated state record supporting the specific electrical contractor credential described on page 8.

SignalHire listing

Third-party phone discrepancy only; directory entries may be outdated.

W3C WCAG 2.2

Accessibility implementation and testing reference; not a certification of the current site.

Google local business documentation

Guidance for accurate business structured data; eligibility does not guarantee a search feature.

Google Web Vitals guidance

Performance definitions and field thresholds used for the proposed acceptance criteria.

Google review policies

Review request practices and restrictions on incentives or biased solicitation.

Included in the companion package

Read and present

- This illustrated proposal — open locally in a browser.
- Proposed role summary — a short handout for the hiring conversation.
- 90-day work plan — proposed milestones and blank review fields.
- Office toolkit — editable instructions, checklists, and message drafts.
- Public claims register — 13 public topics with confirmation questions.

Adapt in a spreadsheet

- Inquiry tracker
- Service and coverage register
- Estimate follow-up
- Project evidence and permission record
- Public copy change log
- Monthly review with definitions

The worksheets contain no customer data. Keep a blank master and create owner-controlled working copies if adopted. The proposed wording, wireframes, and templates are ready for review; the live website has not been changed.
