PREPARED FOR THE OWNERS · 1 NOVEMBER 2026

SYSTEM SOLUTIONS PROS

Website notes and a request to join the team

Ideas from a careful outside read.
A modest way to start helping.

Notes from reading your public website, with sketches, 38 ideas to talk through, and a simple plan for my first 90 days if you decide to bring me on.

Make the offer clear

Could the website say sooner what you do, and help each customer find the right service?

Make the next step easy

Service pages, project photos, and a simple contact form might make getting in touch easier.

Make upkeep manageable

Someone keeping the website's facts current, plus a few office templates you can use or ignore.

Written from the public website and public records only. I haven't seen how your office works, so the office ideas are suggestions to adapt or ignore.

02 / Proposed starting role

03 / 30/60/90-day plan

06 / Website ideas

10 / Website sketches

17 / Office templates

23 / Questions for you

New to the trade, and ready to learn it

I'd like to join System Solutions Pros in a paid role helping with the website and day-to-day office work. I'm new to the electrical business, so I'd start by learning how you already work and asking a lot of questions. I'd take on more only as I earn it.

What I'm asking for

Website and Office Support
Help keep the website accurate and clear, take on office tasks you choose, and make sure follow-ups don't slip.

Where I could help first

- Talk through the ideas in this report and keep only the useful ones.
- Draft clearer service wording for you to check and approve.
- Turn approved project photos and details into short project stories.
- Adjust messages, checklists, and records to fit how you already work.
- Keep a simple list of what's done, what's waiting, and what's next.

How I'd go about it

- Learn what already works before suggesting changes.
- Agree with you on priorities and who decides what.
- Do what I said I'd do, and keep you posted.
- Ask when I don't know something, rather than guess.
- Take on more only when you think it makes sense.

A small, low-risk way to start

The first jobs would show whether I'm useful to your business. Starting with simple website and office tasks lets us see how we work together before taking on anything bigger.

This report is starting material only: my notes on the public website, some sketches, draft wording, and templates. I'd check every business detail with you and change or drop anything that doesn't fit.

> **What I'm asking for:** a paid position with a small starting scope, agreed hours, and check-ins at 30, 60, and 90 days. We'd agree pay based on the work you'd like me to do.

The role and title are just a starting point for discussion. You'd decide what gets published, what I can access, and anything promised to customers.

Learn first, help where it’s useful, then decide together

The first 90 days would be mostly learning, with some useful work along the way. Everything here can change to fit your hours and priorities.

DAYS 1–30

Learn how things work and help with a few small things

Learn: your priorities, your services, how customers reach you, who approves what, and which tasks you’d like me to take on.

Aim to deliver: a sheet of company facts for you to check, suggested homepage wording, a draft for one service page, and a short list of website fixes we agree on.

Check in: on any decisions you need to make, and with whoever publishes changes to your website.

Day-30 check-in: is the work accurate and useful? What should come next?

DAYS 31–60

Take on a couple of regular tasks

Take on: two regular tasks you choose, such as keeping the website current or following up on paperwork.

Aim to deliver: a record of website changes, a few templates or checklists adjusted to how you work, one project story if you have photos to share, and ideas for the contact form.

Learn: how customer requests move from the website to the right person in your office.

Day-60 check-in: are these tasks actually helping, or creating extra work?

DAYS 61–90

Keep things running and decide what’s next

Keep up: the regular tasks, a weekly plan, and a monthly check of the website’s facts.

Aim to deliver: a summary of what got done, short how-to notes for the regular tasks, and suggestions for what to do next.

Make sure: someone else on the team could pick up the work if needed.

Day-90 check-in: is this a good fit for both of us? If so, agree the ongoing role, hours, and pay.

How we’d know it’s working

Work you found useful, website problems fixed, records you actually use, and your honest feedback. Any time saved would be measured, not guessed.

No surprises

If I’m stuck waiting on a fact, a permission, or someone else, I’ll say so early and work on something else in the meantime.

> The 38 website ideas later in this report are for the longer term, and only if you want them. The first 90 days stick to the small starting scope we agree on.

MY FIRST TWO WEEKS

Start small, listen, and be useful

Agree who I check in with and what my first jobs are. Spend the first weeks mostly learning how the company works.

WORK PERIOD	MY ASSIGNMENT	WHAT YOU'D SEE
Days 1–2	Learn your main services, how customers reach you, and who does what. Go through this proposal with you and pick up to three first tasks.	A one-page list of my first tasks, who to ask about what, and my questions.
Days 3–5	Check the website's facts with you. Draft suggested homepage wording and list the first fixes for you to review.	A facts sheet, draft homepage wording, a short fix list, and a weekly update.
Days 6–8	Make the changes you asked for. Draft one service page and adjust one office checklist or message to how you work.	Updated drafts, a service page draft, and one useful template.
Days 9–10	Go over what's done and what's waiting on a decision, and agree on the next two weeks.	A simple list: done, waiting, and next.

A simple weekly routine

Agree the week

Agree on two or three things to get done, and leave room for anything urgent.

Do the work

Get it done, ask questions as they come up, and save non-urgent questions for one short list.

Look back

Send a short update and, if you like, have a 15-minute check-in.

My weekly update would answer four questions

> **Done:** [what I finished]
>
> **Question for you:** [what I need you to decide, and my suggestion]
>
> **Next:** [what I'll work on, and when]
>
> **Waiting on:** [anything I'm stuck on]

"Day" means a scheduled workday. Hours and workload would be whatever we agree.

HOW WE'D WORK TOGETHER

Clear roles and honest check-ins

What you can count on from me

- Doing what I said I'd do, carefully and on time.
- Keeping records tidy and next steps clear.
- Telling you how things are going, including when I'm stuck.
- Respecting company information and your decisions.
- Suggesting small improvements, and following through if you agree.

What would help me do this well

- Knowing what matters most, and who to ask.
- Time to learn how you do things.
- Knowing who approves website changes.
- Quick answers at our check-ins.
- A shared understanding of my hours and duties.

Who decides what

WORK I COULD HELP WITH	WHO DECIDES
Website wording, fix lists, and project stories	You confirm the facts and approve what's published. Technical changes go through whoever runs your website now.
Follow-up messages and records you assign me	Customer messages follow your way of doing things, and you decide what I can send.
Paperwork for estimates	You and your estimators decide all pricing, scope, and promises to customers.
Anything else	Only if you ask, and only if I'm qualified for it.

What we'd look at in each check-in

QUESTION	WHAT TO LOOK AT (DAYS 30, 60, AND 90)
Did I get things done?	The agreed work is finished, and problems were raised early.
Was it accurate and useful?	The facts are right, and the work is something you actually use.
Is it organized?	Records are current and anyone can see what's next.
Did I communicate well?	Short, clear updates, and questions asked at the right time.
Is it a good fit?	The work matches your priorities and shows what to try next.

> **After each check-in:** note what's working, what to change, and what comes next. Sales and search rankings depend on many things, so I wouldn't claim credit for them.

This report was written from outside the company. I haven't seen anything private, and any inside work would only start if you hire me.

Start with the basics before adding more pages

A note before you read on: everything from here is based only on the public website. I don't know your customers, your history, or why things are set up the way they are. Please read these as questions and ideas, not instructions.

If you do make changes, a good place to start might be the basics: what the company does, the service pages, and the contact form. Other improvements are easier once those line up.

One possible direction

Describe System Solutions Pros simply as an electrical and low-voltage contractor. Give commercial, low-voltage, and home customers an easy way to find their service, with real project examples.

01 Confirm the business facts

Confirm the preferred services, coverage, public credentials, contact details, and the meaning of project and experience totals.

02 Rewrite the opening screen

State what the company does, who it helps, and where it works. Keep one primary project inquiry action and a visible phone option.

03 Connect each service to a useful destination

Replace repeated general destinations with relevant sections first, then publish dedicated pages for priority work.

04 Make inquiries easier to assess

Collect service, city or ZIP, project details, and a usable reply method. Explain the next step and separate emergency calling from ordinary estimates.

05 Build proof and a repeatable maintenance routine

Add permitted project photos, clear case studies, sourced credentials, and a small set of reusable records.

What good would look like

A new visitor can identify the business, find the relevant service, check the service area, and understand how to start a conversation. Staff can keep public facts consistent with less repeated writing.

How to read this proposal

Observed means something I saw on the public website. **Proposed** means an idea for you to consider. **Confirm** means only you know the answer. The order is my best guess, not based on any sales numbers.

Scope: This review covers the public website and public listings. It does not inspect private tools, customer records, inboxes, analytics, or internal processes. No live website edits or customer messages are included in this report.

What the public pages show

These are the things I noticed that seemed most worth asking about. The sketches later show what some of the ideas could look like.

OBSERVED	WHY IT MIGHT MATTER	IDEA
The first headline is “Licensed. Insured. Done Right.” Homepage	It establishes a trust theme but does not name the work.	Put the business definition in the headline; move verified credentials into supporting proof.
Featured service links lead to the same general service page. Homepage	A visitor must search again for the service they chose.	Use specific destinations and descriptive link labels.
Project counters show 50+ on Home and 500+ on About. Homepage, About	The difference in date or scope is unexplained. Both minimums could be true.	Use one documented count, or label company projects and combined career experience separately.
Coverage wording ranges from Central Florida to statewide; LinkedIn names narrower regions. Homepage, Company LinkedIn profile	Visitors cannot confidently judge geographic fit.	Publish confirmed areas and explain any service-specific travel limits.
The inquiry form has no visible city or ZIP field. Contact	Location may require another exchange before assessing fit.	Add one location field and make the preferred reply method clear.
Footer Privacy and Terms links returned Home when followed in the public-page check. Homepage	The named documents were not reached.	Link to actual approved pages and verify the routes in a browser.
Copy includes “Industry Experiance” and “across throughout Florida.” About, Services	Editing errors interrupt an otherwise professional impression.	Proofread all templates, pages, and repeated footer text.

Useful material already exists

The public pages contain service descriptions, contact routes, and credential information. The redesign can organize and verify that material before commissioning a larger content library.

Checks still to perform

This report does not assign a speed score, accessibility score, conversion rate, or form-delivery result. Those require separate testing; the proposed acceptance checklist appears on page 22.

Give every public claim a clear meaning

One idea: keep a single sheet of approved facts, so the website, profiles, estimates, and future updates all say the same thing.

CONFIRM / SCOPE AND HISTORY

Company age and experience

Separate years the company has operated from the team's combined experience. Give project totals a scope and a review date. The public About page mixes experience and completed-work statistics. About

Record: approved wording, evidence held by the owner, review date, and where the wording appears.

OBSERVED / DATED PUBLIC RECORD

Electrical contractor credential

The DBPR page timestamped September 23, 2026 lists EC13012352 as current and active, under John G. Melito with DBA System Solutions Pros, LLC. Florida DBPR license record

Record: exact credential description and a fresh owner check before publication.

CONFIRM / OTHER CLAIMS

Specialty and partner statements

ES12002124, dealer authorization, union affiliation, technician qualifications, insurance, and bonding claims need precise supporting wording. This review did not independently establish those details. About, Services

An unverified item is a question to resolve, not evidence that the claim is wrong.

CONFIRM / CONTACT EXPECTATIONS

Office hours and emergency response

Weekday office hours and round-the-clock emergency availability can coexist. Explain the emergency number, geographic availability, and what callers can expect. Keep response wording consistent. Contact

Record: ordinary contact hours, emergency call path, and any owner-approved response promise.

OBSERVED / DIRECTORY MISMATCH

Public phone number

The website displays (727) 761-7767; SignalHire displays (727) 514-8766. The directory may be stale. Confirm the preferred number and correct accessible listings. Contact, SignalHire listing

Record: business number, email, website URL, and owned profile links.

CONFIRM / PROOF

Ratings and project material

Any rating needs an identifiable source, review count, and checked date. Project photos and customer quotations need permission and accurate attribution. Avoid unsupported superlatives.

Record: source link, approved excerpt or image, permission scope, and publication date.

Included: an editable public claims register with 13 topics. Its verification column keeps a documented observation separate from the owner's answer. No private evidence needs to be shared with the outside reviewer.

Could the top of the homepage say what you do?

PROPOSED COPY / FOR OWNER REVIEW

Business definition

System Solutions Pros provides electrical and low-voltage installation, upgrades, and service for commercial, industrial, and residential properties.

CURRENT HEADLINE

Licensed. Insured. Done Right.

A broad assurance. The specific business offer appears later.

PROPOSED HEADLINE

Electrical and low-voltage systems for businesses and homes.

The business is identifiable in the first sentence.

Proposed supporting copy

From commercial electrical projects and building communications to home power upgrades, System Solutions Pros helps customers plan their next installation or improvement.

Location line: Serving [confirmed primary region]. View service areas.

Main action: Discuss Your Project **Secondary action:** Call (727) 761-7767

The phone shown is the current website number. Confirm it before implementation. Replace the location placeholder with approved wording.

Three clear entrances below the headline

Commercial and industrial

Build-outs, new construction, service upgrades, and power distribution.

Link: Explore commercial electrical.

Low voltage and building systems

Structured cabling, access control, surveillance, and fire alarm services where offered.

Link: Explore low-voltage systems.

Residential electrical

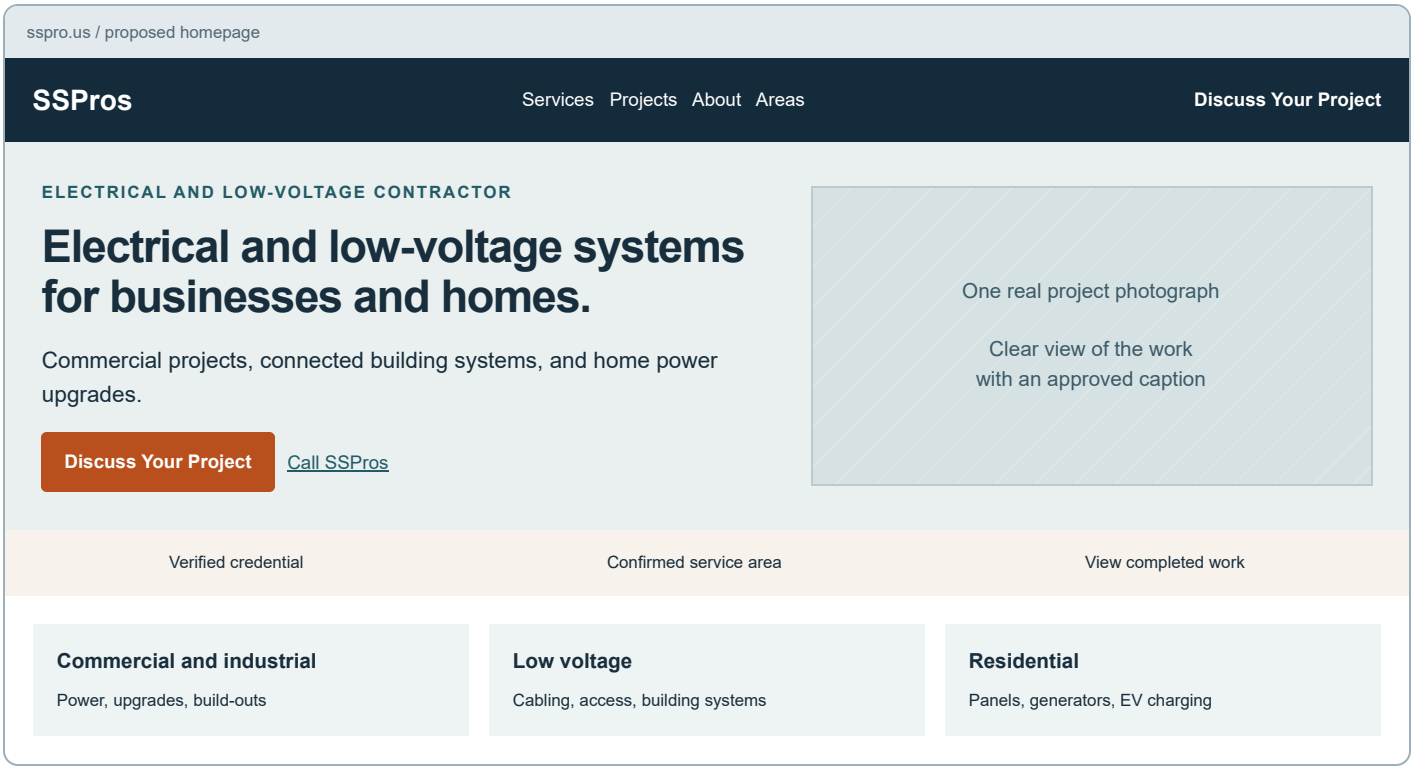

Generators, panel upgrades, EV charging, and other confirmed home services.

Link: Explore home electrical.

Positioning decision: Commercial work is shown first because the current Services page leads with it. That is a proposed emphasis, not a conclusion about revenue or capacity. The owners can reorder the same three routes to match the work they want.

A sketch of the homepage, on computer and phone

Illustrative wireframes. The rectangles show placement and content; they are not screenshots of a finished website. Photography and business claims remain subject to owner approval.

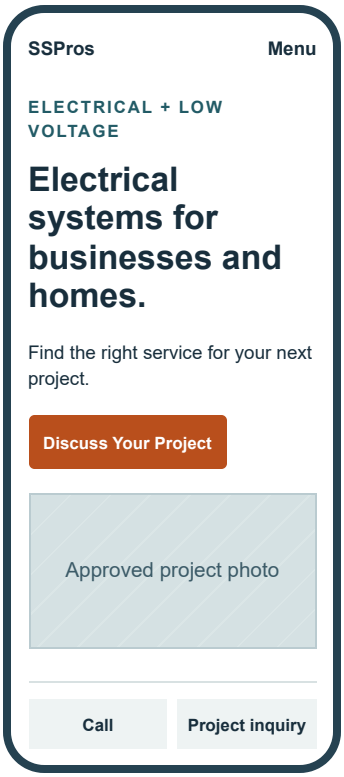

What would change

1. **The business moves into the headline.** Trust language supports the offer below it.
2. **One real image anchors the first screen.** Avoid a rotating slideshow or decorative video that competes with the message.
3. **Services become three obvious paths.** Each card opens relevant information.
4. **Projects move ahead of broad claims.** Add two or three approved examples, then a short explanation of the process.
5. **Contact stays within reach.** On mobile, a compact bottom bar offers calling and project inquiry without covering page content.

Homepage order after the first screen

Selected projects → how a project starts → company introduction → service-area summary → final inquiry action → complete footer.

Use clear type, consistent spacing, and the existing brand identity where it is usable. The navy, teal, and warm accent in this report demonstrate hierarchy; final colors require a brand and contrast check.

Turn a service choice into a useful conversation

1. Choose a service	2. Understand the work	3. See evidence	4. Make contact
Homepage or service hub	Specific scope and answers	Relevant project example	Service carried into the form

SERVICE PAGE EXAMPLE

Commercial build-outs and tenant improvements

Open with who the work is for and what the company can help deliver.

When to contact us
New space, changed layout, or electrical capacity needs.

Scope to discuss
Plans, existing conditions, electrical scope, coordination, and timing.

Relevant completed project
Need → work performed → documented outcome.

Common questions
What information helps an estimate? How are site visits arranged? What affects the schedule?

Discuss a Build-Out

Do not promise a permit scope, fixed price, or completion date unless it matches the owners' actual offering.

Require the selected contact method

Project details *
What work is needed? Timeline is optional.

Send Project Details

Link to the actual privacy notice beside the form.

Confirmation and errors

Keep entered details if validation fails. Explain each field error in text. Display a successful submission message only after the form system accepts the request; give the next step without implying an appointment is booked.

Separate emergency help

Show the confirmed emergency calling route beside the form. State that the ordinary inquiry form is not an emergency dispatch channel. The owners should confirm availability and response wording.

Build the pages in a useful order

Keep navigation short: Services, Projects, About, Service Areas, and Contact. Give the main project inquiry action a consistent position.

PAGE OR TEMPLATE	WHAT THE PAGE COULD INCLUDE	RELEASE APPROACH
Home	Business statement, three service routes, relevant proof, contact action, service-area summary.	First release.
Services overview and three family pages	Who each family serves, available work, links to detailed pages, and a next step.	Use meaningful page sections immediately; expand into hubs as content is ready.
Six initial detailed service pages	Proposed candidates: commercial build-outs, power/service upgrades, structured cabling, fire alarms, generators, and panel upgrades.	Choose order by owner priorities and confirmed scope. Use one reusable template.
Projects index and case studies	Filter or label by service. Each story explains the customer need, scope, constraints, and result.	Aim for three approved examples. Publish fewer if evidence is limited.
About	Factual company history, responsible people, verified credentials, and a link to completed work.	First release.
Service Areas	Actual geographic coverage, any variation by service, and an inquiry route for uncertain locations.	First release. Add town-specific pages only when they contain genuinely useful local content.
Contact and emergency panel	Short form, phone and email, ordinary hours, separate emergency information, confirmation and error states.	First release with delivery verified by the authorized provider.
Privacy and other relevant policies	Approved wording reflecting the actual collection and use of information.	Working destinations before launch. Avoid publishing generic policy promises.

Keep useful existing addresses

Retain current URLs where practical. If a page moves, map the old address to the most relevant new one. Update navigation, internal links, and the sitemap together.

Plan expansion around demand

EV charging, surveillance, access control, additional industries, and more case studies can follow once the core route works and the owners can support the content.

Page-count discipline: The candidate service list is a scoping tool, not a requirement to launch every page at once. A small set of accurate, complete pages should establish the structure for future additions.

Establish the business and contact path

Group 1 / The basics, if you want to start somewhere.

01 Approve the business definition

Agree on the main offer, preferred customer groups, and service order. Use the definition on Home, About, and public profiles.

Done when: One message sheet records the approved wording and scope.

02 Create the public fact sheet

Resolve project-count labels, company age versus experience, credentials, ratings, service claims, and contact details.

Done when: Each published claim has a source or an owner confirmation and a review date.

03 Define the service territory

List actual locations served and any differences between routine, commercial, and emergency work.

Done when: Coverage wording matches across the website and owned profiles.

04 Rewrite the homepage opening

Use the proposed business-led headline, short support copy, primary inquiry action, and visible phone option.

Done when: Visitors can identify the business and next step from the first screen.

05 Simplify navigation

Build consistent desktop and mobile menus using familiar labels and a visible contact action.

Done when: Every main destination is reachable without deciphering company jargon.

06 Create three service entrances

Separate commercial/industrial, low-voltage systems, and residential routes, in the approved order.

Done when: Each route explains who it serves and leads to relevant work.

07 Replace generic service destinations

Point each featured service to its own useful section or page. Use labels that name the destination.

Done when: Every featured card reaches the service it advertises.

08 Improve the inquiry form

Add city or ZIP, service, short project details, and the selected reply method. Make optional fields visibly optional.

Done when: The form asks for what the team needs to reply, and mistakes don’t erase what the visitor typed.

09 Make mobile contact easy

Use tappable contact links and a compact call/inquiry control with enough room around it.

Done when: Controls remain usable without obscuring content or the keyboard.

10 Verify the complete contact route

The provider tests submission, storage or delivery, duplicate handling, success state, and failure state. The owner confirms receipt.

Done when: A documented test reaches the intended destination; no delivery claim rests on a screen message alone.

Add the detail that helps customers decide

Group 2 / More detail to help customers decide.

11 Clarify emergency contact

Give urgent callers an explicit calling route, actual availability, and suitable expectations.

Done when: Ordinary estimates and emergency calling are visibly distinct.

12 Repair policy and trust links

Replace footer routes that return Home with working, appropriate policy destinations.

Done when: Every footer label opens its named content.

13 Build the three service hubs

Give each family an overview, work categories, relevant proof, common questions, and a contact action.

Done when: Visitors can compare the options within the family they selected.

14 Write priority service pages

Use one template: need, scope, process, evidence, questions, coverage, and next action.

Done when: Each page contains useful service-specific information and a relevant inquiry route.

15 Explain scope and the project process

Describe what information starts an estimate, when site review is needed, and how next steps are confirmed.

Done when: The website avoids implying a fixed price or booking before assessment.

16 Use real company photography

Collect approved images of work, people, and equipment; write accurate captions and useful alternative text.

Done when: Images are relevant, permitted, and sized for the page.

17 Publish a project portfolio

Group completed work by service and link from related service pages.

Done when: Customers can find an example relevant to the work they need.

18 Write credible case studies

Document the original need, constraints, work, and outcome. Use measured results only when recorded.

Done when: Each story has approved facts and photo/customer permissions.

19 Source ratings and testimonials

Show the platform, count, and date for any rating. Attribute quotations and retain permission where required.

Done when: Every testimonial can be traced to its source without implying unsupported results.

20 Introduce the people and company

Replace broad promotional history with approved company facts, people, responsibilities, and useful credentials.

Done when: About explains who stands behind the work and links to evidence.

Make the site consistent and easier to use

Group 3 / Consistency and ease of use.

21 Standardize the credential section

Use the same approved license wording, number formatting, and evidence links throughout.

Done when: No page introduces a broader claim than the approved fact sheet.

22 Publish the Service Areas page

Use a readable list or accessible map with a text equivalent. Explain any differences by service.

Done when: A visitor can determine whether to inquire without assuming statewide dispatch.

23 Answer common service questions

Cover estimate preparation, site access, coordination, service fit, and next steps using approved answers.

Done when: Answers are specific enough to reduce repeated basic questions.

24 Proofread every page

Correct typos, inconsistent capitalization, repeated claims, and conflicting response language.

Done when: A full-page and repeated-template copy review is signed off.

25 Create a consistent visual system

Set typography, spacing, button styles, cards, colors, image ratios, and form states.

Done when: The same type of information looks and behaves consistently.

26 Refine phone and tablet layouts

Check long titles, cards, tables, menus, image crops, and the on-screen keyboard.

Done when: Pages fit phones and tablets without sideways scrolling or hidden content.

27 Build and test accessibility

Use semantic headings, visible labels, keyboard focus, sufficient contrast, useful alt text, and accessible errors.

Done when: The site is checked for people with poor eyesight or who don’t use a mouse (the WCAG 2.2 AA standard).

28 Write useful search titles

Give each important page a descriptive title and concise summary consistent with its content and approved locations.

Done when: Google results show clearly what each page is about.

29 Add accurate business data

Add the hidden business details search engines read (like address and hours), only where they’re accurate.

Done when: The details match what the page shows, with nothing made up.

30 Align public business profiles

Use the approved business description, service categories, number, URL, and service coverage on controlled profiles.

Done when: Owned profiles agree; external correction requests are tracked separately.

Implementation references: W3C WCAG 2.2 and Google local business documentation. These are design and implementation targets; this report does not certify conformance or promise search placement.

Verify the release and keep it current

Group 4 / Testing and upkeep.

31 Improve image delivery

Make photos smaller in file size so pages load quickly, without losing quality.

Done when: Project imagery stays sharp without unnecessary download weight or layout jumps.

32 Check indexing and redirects

Make sure Google can find the important pages and that old links still go somewhere sensible.

Done when: Important public pages are discoverable and old links reach the right destination.

33 Measure and improve performance

Check how fast pages load on a phone, and fix anything slow.

Done when: Load times are measured before and after.

34 Complete functional launch checks

Test menus, buttons, contact links, and the form. Your website provider checks spam protection and security.

Done when: The public checklist passes and the provider records private checks and recovery steps.

35 Measure meaningful contact actions

Count form submissions and phone or email taps, if your website provider sets it up.

Done when: A tap on a phone number is counted as interest, not as a call or a sale.

36 Review inquiry fit by service

Offer a blank log for service, region, source, outcome, and next action. Staff decide whether to adopt it.

Done when: A consistent record can show which inquiries fit the work the owners want.

37 Review results after launch

Measure how things are now, then compare later, keeping busy seasons and other changes in mind.

Done when: Changes are judged from evidence, with no invented percentage-growth promise.

38 Assign ownership for upkeep

Name who updates public facts, content, forms, profiles, and technical maintenance, with a recurring review date.

Done when: Each recurring task has a responsible person and a next review date.

The order is only a suggestion: easy reading, phone-friendly layouts, working links, and a working form matter on every page from the start. Performance targets should follow Google Web Vitals guidance; no current performance score is asserted here.

How the ideas fit together

Ideas 1–7 cover what the company does and the top of the homepage. Ideas 11–24 add service detail and trust. Ideas 25–33 cover design and being found online. Ideas 10 and 34–38 cover testing the contact form, upkeep, and measuring results.

Practical records the owners can choose to use

I haven’t seen how your office works, so these are optional ideas, not criticism. Use any template that fits the tools you already have, and ignore the rest.

01 / Maintain a public facts register

Idea: Keep one row per claim, with the source, approved wording, owner, and review date. Use it before updating any page or profile.

Why it helps: Fewer contradictory public statements and easier content approval.

Ready to use: Populated public claims CSV; blank service/coverage register.

02 / Use a short inquiry record

Idea: Capture the service, city or ZIP, reply details, owner, status, next action, and due date. Avoid collecting details that are not needed at first contact.

Why it helps: Less repeated information gathering and clearer handoffs, if the owners adopt the process.

Ready to use: Blank inquiry tracker and field guide.

03 / Give every open inquiry a next action

Idea: Use a small set of statuses and one accountable person. A due date means the staff have chosen when to follow up; it is not a public response guarantee.

Why it helps: An open item can be reviewed without searching several conversations.

Ready to use: Status definitions and daily/weekly review checklist.

04 / Standardize routine writing

Idea: Prepare short drafts for acknowledgement, missing details, estimate follow-up, scheduling confirmation, and review requests. Staff personalize and send them.

Why it helps: Less rewriting and more consistent expectations.

Ready to use: Five editable message templates.

05 / Keep public listings aligned

Idea: Record the public name, website, phone, description, hours, and coverage for each controlled profile. Log correction requests for third-party sites.

Why it helps: Directory differences become a manageable checklist.

Ready to use: Public copy/change log and approved-facts checklist.

Carry the same clarity into estimates and closeout

Keep each record small, useful, and assigned to someone. Introduce the templates that remove a specific repeated task before adding more administration.

06 / Use an estimate preparation checklist

Idea: Record the request, site conditions, assumptions, exclusions, access needs, and questions for the estimator. Keep version numbers and dates clear.

Why it helps: The estimator receives a more complete brief and can spot missing information.

Ready to use: Estimate brief and follow-up tracker; no pricing rules are prescribed.

07 / Create a consistent job handoff

Idea: Use a shared project identifier and checklist for approved scope, contacts, schedule, access, changes, and completion documents.

Why it helps: The next person can see what is agreed and what still needs confirmation.

Ready to use: Project folder example and handoff checklist for internal adoption.

08 / Make document follow-up visible

Idea: Keep a checklist of outstanding approvals, change confirmations, completion documents, and invoice-status questions for the responsible staff member.

Why it helps: Administrative questions can be routed to the right person without assuming the work is complete or paid.

Ready to use: Blank handoff and document-status fields; owners retain their accounting process.

09 / Capture project proof and permissions

Idea: At closeout, record the work performed, approved images, customer wording, and what may be published. Keep photo and testimonial permissions specific.

Why it helps: Finished work can become useful website content with less later reconstruction.

Ready to use: Project evidence CSV and case-study worksheet.

10 / Review a small monthly summary

Idea: Record public-site corrections, new proof, open follow-ups, and optional inquiry totals. Note what is unknown and assign the next action.

Why it helps: The website stays current and recurring office tasks have a visible owner.

Ready to use: Monthly review CSV with metric definitions and blank results.

One way to keep track of each customer request

The website collects the initial facts. An optional office routine carries those facts forward without making the customer repeat the same introduction.

STAGE	MINIMUM RECORD	NEXT ACTION
New inquiry	Date, source, service, location, reply method, brief description.	Assign a person to assess fit.
Reviewing fit	Service/coverage fit, missing details, urgency, responsible person.	Request details, arrange assessment, or close with a reason.
Preparing estimate	Site information, scope questions, estimate version, target follow-up date.	Estimator confirms scope and sends approved estimate.
Estimate sent	Sent date, latest version, agreed next contact, customer response.	Follow up at the chosen time or record the decision.
Accepted and scheduled	Written scope approval, site contact, access, schedule, outstanding documents.	Hand off to the responsible project person.
Closed	Won, lost, unsuitable, or no response; reason where known.	Complete records and request permitted feedback after suitable closeout.

Daily review · suggested

- Review new items and assign responsibility.
- Check follow-ups due today.
- Update status after a conversation.
- Give every open item a specific next action.

Weekly review · suggested

- Review overdue or unassigned items.
- Resolve unclear scope or missing documents.
- Identify repeated questions the website could answer.
- Close stale items using an agreed reason.

The tracker stays deliberately simple

The included blank CSV uses 17 fields. Its essential review columns are **Status, Assigned To, Next Action, and Next Action Due**. Store it only in an owner-controlled location if it later contains customer data. Do not publish it with the website.

> **Automation comes after the routine:** a future form-to-record connection or reminder can be evaluated by the owners and their provider once the fields and responsibility are clear. The present package supplies blank records and instructions; it does not connect to internal systems.

Short templates that set clear expectations

Illustrative drafts. Replace bracketed fields, confirm the facts, and send through the business's normal process. No messages have been sent.

1 / Acknowledge an inquiry

> Hi [Name], thanks for contacting System Solutions Pros about [service] in [city]. We've received your details and will review the project information.
>
> [Responsible person] will follow up by [confirmed date/time] about the next step. An appointment is confirmed once we agree on the details with you.

2 / Request missing information

> Hi [Name], to assess your project, could you send [specific missing information]? Please also confirm the project city or ZIP and the best way to reach you.
>
> Once we have that information, we can advise on [site review / estimate preparation / the appropriate next step].

3 / Follow up on an estimate

> Hi [Name], I'm following up on estimate [reference/version] for [brief scope], sent on [date]. Do you have any questions about the scope or next steps?
>
> If your plans or timing have changed, let us know so we can keep our records current.

4 / Confirm an agreed appointment

> Hi [Name], this confirms the [site visit / agreed work] for [date and arrival window] at [location]. The site contact is [name and number].
>
> Please confirm [access arrangements or preparation]. If anything changes, contact [business contact]. The agreed purpose of this visit is [purpose].

5 / Ask for an honest review

> Hi [Name], thank you for choosing System Solutions Pros for [project]. If you would like to share your experience, you can leave an honest review here: [approved review link].
>
> If you have a question about the completed work, please contact [business contact].

Offer review requests consistently to eligible customers; avoid incentives or selecting only customers expected to leave positive feedback. See Google's review policies. Photo or testimonial reuse requires a separate, specific permission record.

Take it in small steps you can review

Go one step at a time, and only move on when you're happy. Dates and costs depend on how many pages you want and who builds them.

STAGE 1

Approve the facts and direction

What you'd get: business definition, service order, territory wording, claims register, page map, and selected first-release pages.

Owner input: resolve business facts privately and return approved public wording.

Move on when: no unresolved factual claim is presented as approved copy.

STAGE 2

Finish copy and visual layouts

What you'd get: desktop/mobile Home, service template, Contact states, About/Areas outline, reusable components, and an initial content set.

Owner input: choose the direction and provide permitted photos or approve a photo plan.

Move on when: every first-release page has content, a purpose, and a next action.

STAGE 3

Build and verify the first release

What your website provider would build: responsive pages, correct routes, working form behavior, policy destinations, redirects, and basic search setup.

Owner/provider input: publish through their existing access, confirm receipt of test inquiries, and record a recovery plan.

Move on when: the agreed acceptance checklist passes before release.

STAGE 4

Add depth and adopt useful templates

What you'd get: additional service pages and approved case studies; adapt the selected clerical records to the existing office routine.

Owner input: select a record owner and decide which templates solve a real repeated task.

Move on when: each added page has unique value; each adopted record has a user and a purpose.

STAGE 5

Review and maintain

What you'd get: public link/content recheck, a list of corrections, and a monthly review routine. Provider and staff can add private metrics if they choose.

Move on when: recurring tasks have owners, review dates, and recorded next actions.

Responsibilities: Outside support prepares public research, copy, layouts, and blank templates. Owners approve business facts and decide operational practices. Their authorized website provider builds, publishes, and performs private delivery and technical checks.

Check the experience and measure the right things

Public website acceptance

- [ ] The first screen states the business and a clear next step.
- [ ] Featured service links reach the promised information.
- [ ] Contact and coverage information agree across pages.
- [ ] Phone links, navigation, footer links, and redirects work.
- [ ] Mobile layouts do not hide content or cover form controls.
- [ ] Form labels, errors, keyboard focus, and heading order are usable.
- [ ] Project proof and public claims have approved wording.
- [ ] No template placeholders or unapproved claims remain.

Provider and owner acceptance

- [ ] A permitted test request reaches the intended private destination.
- [ ] Failure and duplicate submissions are handled sensibly.
- [ ] Spam protection and secure form handling are checked.
- [ ] Public policies match the actual form and tracking behavior.
- [ ] URLs, indexing settings, and business markup are reviewed.
- [ ] Backups, deployment recovery, and maintenance responsibility are documented.
- [ ] The staff know where inquiries arrive and who acts on them.

A useful measurement plan

MEASURE	DEFINITION	WHO CAN VERIFY IT
Successful form requests	Real form submissions, not counting spam or duplicates.	Provider and staff.
Good-fit requests	How many requests are for work you do, in areas you serve.	Owner-selected staff.
Time to first reply	How long until a person first replies.	Staff using their own records.
Estimate outcomes	Accepted, declined, and pending estimates tracked by sent-date group and service. Do not treat pending as lost.	Owners or estimating staff.
Public quality	Broken links, stale facts, incomplete pages, and new approved project examples.	Outside reviewer or provider.

> **Standards to aim for:** the W3C WCAG 2.2 guidelines for people with disabilities, and Google's guidance that a page should show its main content within about 2.5 seconds and respond quickly to taps. Google Web Vitals guidance

I'm not promising any increase in sales. The honest approach is to measure how things are now, then compare later, keeping in mind busy seasons and other changes.

What to decide, if you go ahead

If you decide to update the website, a sensible first step might be the basics: what you do and how to get in touch. More can come later.

A sensible first step

- Approved fact sheet and business definition.
- Revised Home, About, Areas, and Contact.
- Clear service-family routes and a reusable detailed-service template.
- Working policy destinations and relevant redirects.
- Initial approved project examples, where available.
- Responsive and accessibility checks, plus verified inquiry delivery by the provider.
- Named maintenance responsibilities.

Later additions to evaluate

- More detailed service and industry pages.
- A larger project library.
- Additional useful location content.
- Owner-selected reminders or record integrations.
- Ongoing content production and measurement.

Paid advertising, a customer portal, bespoke quoting software, and a broad software migration would need separate objectives and scope.

Questions for you

The job: would the role on pages 2–5 be useful to you? If so, we'd agree my first tasks, paid hours, pay, a start date, and the 30/60/90-day check-ins.

- ☐ **Business focus:** which customers and services should the first screen emphasize?
- ☐ **Territory:** which areas are served, and does availability vary by service?
- ☐ **Public facts:** which counts, credentials, affiliations, and response promises can be supported?
- ☐ **Proof:** which photos, projects, and customer comments may be published?
- ☐ **First release:** which detailed service pages are most useful now?
- ☐ **Responsibilities:** who approves content, publishes changes, responds to inquiries, and maintains records?

What a provider's quote should specify

List page and template counts, copywriting responsibilities, image preparation, revision rounds, form functionality, redirect work, accessibility checks, launch testing, handover, and maintenance. Separate one-time work from recurring hosting, software, and support costs. Identify any optional integration as a separate item.

Thank you for reading.

I know I have a lot to learn about your business. I'd be grateful for the chance to learn it, and to help where I can.

Evidence and a toolkit that can be reused

Public pages reviewed for this proposal on November 1, 2026. Retrieved pages may be cached; the DBPR page carries its own September 23, 2026 timestamp. Recheck time-sensitive facts before publishing revised copy.

Homepage

Opening message, service destinations, counters, public contacts, and footer routes.

Services

Service families, scope descriptions, partner wording, and emergency presentation.

About

History, experience/project presentation, credentials, and company claims.

Contact

Public form fields, reply wording, office hours, and emergency availability.

Company LinkedIn profile

Public company description and stated geographic emphasis; channel positioning context.

Florida DBPR license record

Dated state record supporting the specific electrical contractor credential described on page 8.

SignalHire listing

Third-party phone discrepancy only; directory entries may be outdated.

W3C WCAG 2.2

Accessibility implementation and testing reference; not a certification of the current site.

Google local business documentation

Guidance for accurate business structured data; eligibility does not guarantee a search feature.

Google Web Vitals guidance

Performance definitions and field thresholds used for the proposed acceptance criteria.

Google review policies

Review request practices and restrictions on incentives or biased solicitation.

Included in the companion package

Read and present

- This illustrated proposal — open locally in a browser.
- Proposed role summary — a short handout for the hiring conversation.
- 90-day work plan — proposed milestones and blank review fields.
- Office toolkit — editable instructions, checklists, and message drafts.
- Public claims register — 13 public topics with confirmation questions.

Adapt in a spreadsheet

- Inquiry tracker
- Service and coverage register
- Estimate follow-up
- Project evidence and permission record
- Public copy change log
- Monthly review with definitions

The worksheets contain no customer data. Keep a blank master and create owner-controlled working copies if adopted. The proposed wording, wireframes, and templates are ready for review; the live website has not been changed.
