Prepared for System Solutions Pros · January 2027

Digital Operations & AI Automation

I’d like to join your team in a paid role looking after the website, customer follow-up, and simple AI tools that save time.

I’m new to the electrical business, and I won’t pretend otherwise. I’d start by learning how you already work, then help wherever you tell me it’s useful. You’d approve anything a customer sees.

The first paid assignment

One approved website improvement and one follow-up routine in the system your team already uses.

- A website preview with sources, proposed wording, and approval needs.
- A clear record of each request’s accepted owner, next action, and internal due date.
- A short handover recording what changed and what was checked.

Agree before starting: paid hours and compensation, scope, access, a named approver, delivery and review dates. Confirm whether the website deliverable is an approved preview or a published and checked change.

Work you can inspect

One connected example

A commercial page concept leads to a fictional Tampa build-out request. The proposal then shows the exact saved AI answer, an illustrative reviewer edit asking for the offered floor plan, and the matching office record EX-101.

What is built

- The proposal site, service-page concept, and a review with 38 website ideas.
- An inquiry prototype that extracts details, suggests a route, and drafts a reply.
- Three office routines, an editable workbook, examples, and four message drafts.

What the test establishes

Regrading the same 40 fictional answers yields **39/40 passing the revised automatic checks**. All six labeled urgent cases were escalated; the wording scan flagged zero drafts. One answer incorrectly asserted details about the website form.

These author-written cases do not establish real-world accuracy. Pattern checks can miss meaning and unsupported claims. Qualified company review and private validation are required before a trial.

> Automatic assignment, inbox connections, sending, and reminders are proposed integrations. The current prototype suggests actions; a person maintains the record and accepts the handoff.

A measured start

The first 90 days

Weeks 1–2: listen

Learn how a customer request moves through your office and which software you already use. Bring back a short list of suggestions for you to choose from.

By day 30: first results

One website fix you approved, live and checked. One simple follow-up habit in the system you already use, so no customer is forgotten.

By day 60: one AI task

Try the AI idea you picked on real work, with a person checking everything it produces. Keep track of the time it takes, including the checking.

Day 90: decide together

Keep it, change it, or stop it, based on what actually happened. Agree the ongoing role, hours, and pay.

What we'd watch: how quickly customers hear back, whether requests arrive complete, that nothing is forgotten, and the time spent, including checking the AI's work.

AI tool budget

Between $120 and $400 a month, depending on the plans you choose, and never more than $400 including tax. Hours and pay are separate. Starter: one tool on its $100 plan and the other on its $20 plan ($120). Middle: both on $100 plans ($200). Full: both on $200 plans ($400). A company plan, such as Claude Team or ChatGPT Business, is also an option. No automatic top-ups; any change needs written approval.

Let's choose the first piece of work to own.

A 30-minute conversation to understand your priorities and agree whether this starting role makes sense. Text or call Adam: 805-624-0580.
