Website observations and priorities

I read your public website carefully and wrote down what I noticed. I'd also like to ask for a paid role helping with the website and the office.

A note before you read: I'm new to the electrical business. I wrote this from the public website only. I don't know your customers, your history, or why things are set up the way they are. Please read everything here as questions and ideas, not as instructions.

Start with a small, checked change

Confirm company facts first, then improve the inquiry handoff. Consider service-page expansion when it supports the company's priorities. The current role and assignment are described in the proposal and short summary.

Three public-page observations

- The homepage lists 50+ completed projects; About lists 500+. Confirm what each total means before changing it.
- The contact form does not show a dedicated project-city or ZIP field. Confirm whether adding one helps more than it burdens completion.
- Homepage service links lead to a shared services page. Consider a focused destination for one priority service.

Public-page review dated November 1, 2026; core observations checked during the November 3 review. These observations do not establish lost sales.

Confirm facts and choose the work

Other items from the public review

- The headline “Licensed. Insured. Done Right.” emphasizes trust; test whether naming the work more directly improves understanding.
- Coverage descriptions should be checked for consistent meaning. Public copy includes statewide wording; confirm any regional or service-specific limits.
- The earlier review found Privacy and Terms links returning to the homepage. Recheck their destinations before choosing the correction.
- Small wording errors include “Industry Experiance” and “across throughout Florida.”

Use primary facts

The company should confirm service scope, coverage, counts, credentials, response commitments, and permissions for photos. An external directory is a lead to check, not a reason to overwrite company facts.

Sources and completion

Public sources: sspro.us, sspro.us/about, sspro.us/services, and sspro.us/contact. Keep an approved source, owner, and review date with any factual change.

Finished means the approved version is delivered and checked, with affected links and request handoffs working. An agreed preview is a valid deliverable when publication access is outside the assignment.

> The following 38 ideas are a backlog. Select a small scope based on the company’s priorities and existing systems.

The basic customer journey

First: confirm facts and the inquiry handoff.

1. Agree on one short description of what you do, and use it everywhere.
2. Keep one sheet of approved facts: project counts, license, phone, and hours.
3. Write down exactly which areas you serve.
4. Put what you do in the homepage headline.
5. Keep the menu short, with everyday words.
6. Give business, low-voltage, and home customers their own starting point.
7. Make each service link open that service.
8. Add a city or ZIP box to the contact form.
9. Make it easy to tap and call from a phone.
10. Send an agreed test message through the form to make sure it arrives.

Help customers decide

Next: select content and pages that support priority services.

11. Keep the emergency number clearly separate from the estimate form.
12. Fix the Privacy and Terms links after confirming their intended destinations.
13. Give each type of work a short overview page.
14. Write pages for the services you most want to be known for.
15. Explain how an estimate starts and what happens next.
16. Use real photos of your work and team, with permission.
17. Show finished projects, grouped by type of work.
18. Write short project stories: the need, the work, and the result.
19. Show where any rating or review comes from.
20. Introduce the people behind the company.

Keep information consistent

Choose confirmed corrections first; expand content when there is an owner.

21. Word the license consistently on every page, using approved facts.
22. Add a page listing the areas you serve.
23. Answer the questions customers ask most.
24. Proofread every page.
25. Keep fonts, colors, and buttons consistent.
26. Check pages on phones and tablets.
27. Check keyboard access, labels, readability, and contrast.
28. Give each page a clear title describing its subject.
29. Confirm the correct public business address, hours, and phone.
30. Match approved details across listings on other websites.

Test and maintain the work

Keep checks and upkeep alongside each change.

31. Make photos load efficiently.
32. Keep old links pointing to a useful destination.
33. Measure page loading on a phone.
34. Test the menu, buttons, and form before changes go live.
35. If useful and approved, count form messages and phone taps.
36. Note which requests fit the work the company wants.
37. Compare later results with the starting measurement.
38. Assign responsibility for keeping each part of the website current.

The current office kit

Three routines cover customer follow-up, website updates, and the weekly handoff. The kit includes a workbook with blank tabs and fictional examples, CSV alternatives, instructions, and four editable message drafts. It does not send reminders or connect to company systems.

Use the company’s existing system where it already handles this work. Keep a private working copy and use source links rather than duplicating unnecessary customer details.
